

Smart Farmer Customer Journey Map

Use this framework to better understand customer needs, motivations, and obstacles by illustrating a key scenario or process from start to finish. When possible, use this map to document and summarize interviews and observations with real people rather than relying on your hunches or assumptions.

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

TIP

As you add steps to the experience, move each these "Five Es" the left or right depending on the scenario you are documenting.

Scenario	Entice	Enter	Engage	Exit	Extend
Monitoring Crops, Soil Management, Crops Yield, Automation &User Friendly App, Huge Investment.	<div>How does someone initially become aware of this process?</div>	<div>What do people experience as they begin the process?</div>	<div>In the core moments in the process, what happens?</div>	<div>What do people typically experience as the process finishes?</div>	<div>What happens after the experience is over?</div>
<div>What does the person (or group) typically experience?</div>	<div>Awareness Camps</div> <div>By visiting official websit and getting training</div> <div>Customer Calculates is it possible to cover Acres of farming land</div>	<div>Customer will learn how to use the application</div> <div>Better crop production</div>	<div>By using the application soil moisture, humidity can be monitoring and irrigation methods can be done effectively than the existing methods</div>	<div>Productivity yield will be higher, By using the mobile application what crop must be grown can be determine , so that the crop wastage can be reduced</div>	<div>As compared to the present system this IOT based system is better and user friendly.</div> <div>Time can be saved</div>
<div>What interactions do they have at each step along the way?</div> <div>People: Who do they see or talk to?</div> <div>Places: Where are they?</div> <div>Things: What digital touchpoints or physical objects would they use?</div>	<div>Sensors and irrigation system in integrated to Arduino</div> <div>At the starting the customer will be worried about the process and they will think whether it will be work</div>	<div>The customer will learn how to handle application through the person who has the knowledge about that application</div>	<div>Customer will learn to check the humidity, soil moisture.</div> <div>Customer will learn how to check the condition of crop using IOT</div>	<div>Customer will be happy with the outcome which they got by using Iot application</div> <div>Fertility and condition of the crop field will be improve</div>	<div>Completed experiences section of the profile on the website, iOS app, or Android app</div>
<div>At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")</div>	<div>The primary goal is to lower the productivity loss and to make farming easier.</div>	<div>Initially the growth of the plants, Humidity, soil moisture can be seen & it provides more hope to use the application</div>	<div>monitoring crop parameters using sensors , monitoring soil moisture , humidity setting up irrigation system and connecting to Arduino.</div>	<div>IOT technologies and sensors Help me see what I could be doing next</div>	<div>We are providingthe solution which issecure and reduce theirstress about the losses</div>
<div>What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?</div>	<div>it is more easy for a farmer to watch fieldcrops sensors parameters through smart phone</div> <div>it also enables farmers to irrigate farm field through smart phone remotely</div>	<div>Accurate result of sensor data can be obtained and the use of this technology framers can operate their fei;ld by remote.</div>	<div>Framers will learn how to use the technologies in positive manner</div> <div>notifying farmer for irrigation in smart phone</div>	<div>Saving farmer time</div> <div>Improve crop yield and increase productivity</div>	<div>If other users interact with the person who uses technologies, will be using the same in their field .So the IOT technology will be spread.</div>
<div>What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?</div>	<div>Failure in irrigation may cause damage incrops</div> <div>cloud failure or internet connectivityproblem may cause lack of irrigation</div>	<div>Sensors may give wrong readings</div> <div>lack of controlling irrigation remotely</div>	<div>due to lack of connectivity farmers may suffer controlling their fields and crops.</div>	<div>damage of crops</div> <div>unhealthy crops</div>	<div>poor efficiency of crop production</div>
<div>How might we make each step better? What ideas do we have? What have others suggested?</div>	<div>Ai based automatedagricultural field using iot technologies and sensors.</div>	<div>Farmer will come to know what kind of disease is crop suffering from. Farmers will get notificato using sensor parameters</div>	<div>Problem of the agriculturalm field can be solved and hig productivity can be gained</div>	<div>More accurate of the crop field can be known</div> <div>detecting health of crop earlier and productivity can be increaged</div>	<div>better yield production</div>
